Sl. No.	DESCRIPTION	QTY. (No.)
01.	Supply of Corrosion Analyzer System for establishment of the Non-Destructive Testing (NDT) Laboratory, Civil Engineering Department, DTU (Complete set, as per detailed specification)	01

Specification

Corrosion Analysis System-GalvaPulse

To analyze the risk of corrosion of concrete structures through measurement of corrosion rate (in terms of thickness of steel being dissolved per year in $\mu\text{m}/\text{year}$), the half-cell potential of the reinforcement (in mV) and the electrical resistance of concrete.

Corrosion Rate

It evaluates the corrosion rate based on the Galvano-static pulse technique of measuring polarization resistance using the Stern-Geary equation of active corrosion and Faraday's law of electrochemical equivalence. The applied current range is 0 to 400 $\mu\text{A}/\text{cm}^2$ with pulse duration of 5 to 10 seconds.

Half-cell Potential & Electrical Resistance

Measures the half-cell potential of the reinforcement (range +1000 mV to -1000 mV) and the electrical resistance of the cover layer using the same test head (range 0 to 300 kOhm) having accuracy of + 5%. The test is controlled and data collected and processed using a handheld instrument which has a graphical display and the facility to download the data to the PC for plotting and report generation. **Data Storage capacity of up to 20,000 records.**

Two operation modes: One for speedy measurement using only half-cell potentials and electrical resistance (1 to 2 s/test), and another for corrosion rate, half-cell potentials and electrical resistance (5 to 10 s/test).

Hand held computer: To configure, display and record the test results. A black and white system is preferred over colored as it offers better visibility and longer battery life, and larger storage. **Data Storage capacity of up to 20,000 records.**

Supplied complete with Handheld computer with installed Galva Pulse software & pulse generator, Calibration unit for pulse generator, Measuring cell with 3 meter cable, Sponge for measuring cell, Reinforcement locator, Reinforcement conductivity meter, Cable for data transfer to PC, Measuring cable, Two adjustable reinforcement clamps, Two reinforcement adaptors, 12 mm and 18 mm drill bits, 10 mm Allen key, Sponge for grinding of electrode rings, Hammer and chisel, Measuring tape and chalk, GalvaPulse data viewing and reporting software, Manual in an Attaché case, Cable drum with 15 meters of cable, Check block with embedded a corroding bar and a stainless steel bar.
